

ICA Fine Art Storage Facility

The ICA maintains affordable, state-of-the-art long- or short-term fine art storage for single pieces or entire collections. We offer these services to institutions, corporations, and individual collectors. While in storage, the collections are available to clients during regular work hours.

The ICA facility includes 41,000 cubic feet of specially designed fine art storage. The storage area is constantly monitored to maintain a $50\% \pm 5\%$ RH (relative humidity) and a constant temperature of $65-70^{\circ}\text{F}$ through its individually zoned HVAC system. The facility has a 16-foot entry access adjacent to an environmentally controlled loading dock. The dock is equipped with a hydraulic lift to facilitate the loading and unloading of objects of all sizes.

The ICA employs a 24-hour armed response service to monitor the building's 27-point security-detection system. All art storage areas are restricted access and secured by a second-tier monitoring system.
